

FortiClient™ Endpoint Security Application

FortiClient is an all-in-one comprehensive security solution that extends the power of FortiGate's unified threat management to endpoints on your network. Desktops, laptops, tablets and smartphones, FortiClient enables every device - local or remote, stationary or mobile - to integrate with your FortiGate. With no per-seat license fees, FortiClient takes the headaches out of managing multiple endpoints so your users and guests can work efficiently anywhere at anytime, without compromising your security.

Multiple Platform Protection for a BYOD World

Bring Your Own Device is today's reality. The profusion of portable devices makes it inevitable that people want to work with their own tools. FortiClient supports Windows and Mac OS X computers and iOS and Android mobile devices, and also integrates your home offices, mobile workers and visiting partners.

Affordable Protection, Powerful Features

A single license is all you need to add FortiClient to your FortiGate appliance. The client is a free download that runs on each endpoint device, delivering simple and secure remote access tunnels, antivirus protection, web filtering, two-factor authentication, an application firewall and more.

More Information, More Control

FortiClient allows you to manage the security of multiple endpoint devices from the FortiGate interface. Manage settings, push new policies and track and log activities, even when remote endpoints are behind routers. FortiClient improves your endpoint visibility and control.

Industry-leading Security at Every Endpoint

With the award-winning FortiClient, each endpoint device is fully protected with the industry's fastest response against emerging threats and the backing of the FortiGuard threat research and response centre's vulnerability scanning and signature updates.

Standalone Protection

FortiClient doesn't stop there. The free client download can run in an unregistered mode, delivering a comprehensive solution to devices that aren't associated with a FortiGate secured network. Moving to a registered solution is a simple process, not requiring any additional client installation.

The Endpoint Solution for Your FortiGate Network

- Supports popular desktop and mobile platforms: Windows, Mac OS X, Android and iOS
- Comprehensive security suite for desktop versions, including VPN, antivirus, IPS, application firewall, web filtering and more
- Easily configure and manage desktop client settings from FortiGate
